

# Complexities with Community Engagement An Overview of the H3Africa CE experiences

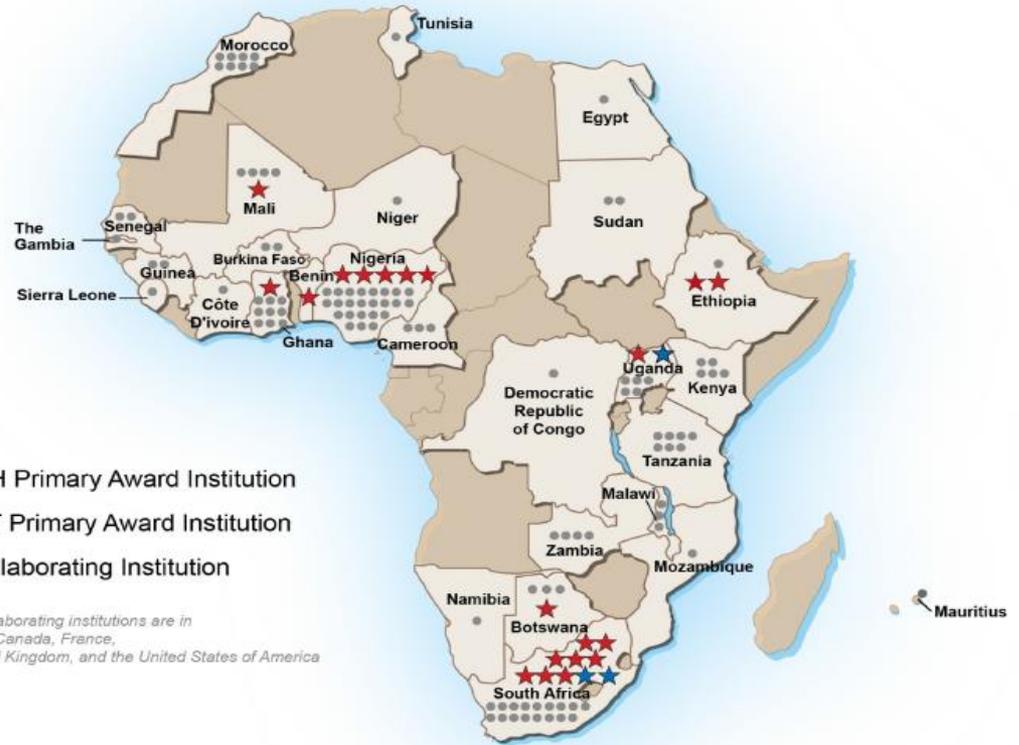

---

Paulina Tindana, DPhil  
Victoria Nembaware, PhD

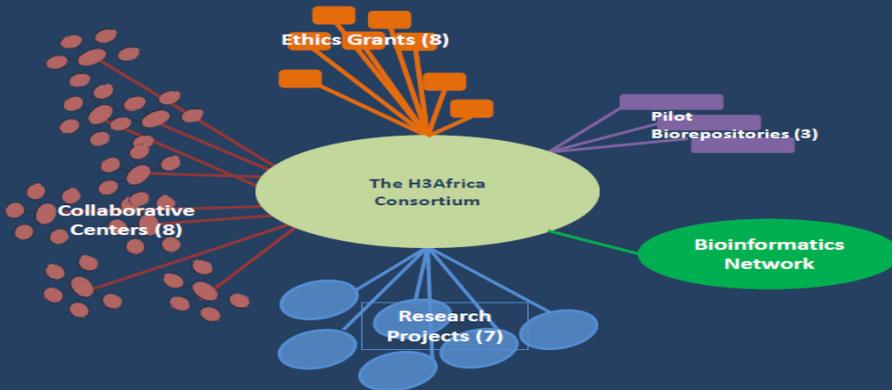

Chair: H3Africa CE Working Group  
Member: H3Africa Ethics Working Group  
Navrongo Health Research Centre, Ghana

# H3Africa

- >\$76 million
- 26 projects
- 27 African countries
- >500 investigators
- Up to 75,000 research participants

## The H3Africa Consortium

Acknowledgement: H3Africa Consortium. For more information: <http://h3africa.org>

# Nature of H3Africa projects

---

- Disease specific genomic studies
    - Stroke, Cardiometabolic diseases, Cervical cancer, Diabetes, Trypanosomiasis, Schizophrenia, Rheumatic heart disease,
  - Multi-centre, multicounty, multiple researchers, research institutions
    - Different levels of relationships
    - Different interests
    - Different target communities
  - Community-based, hospital/clinic based
  - Urban communities, rural communities
  - Sample collection for primary research and contribution to biorepositories
    - Broad consent, sample and data sharing
    - Limited regulatory frameworks in Africa
- 

# The complexities

---

- Genomic research is complex by nature
  - Not just about individuals but families and communities as well
- Growing but limited understanding of genomics and biobanking
  - Novel
  - Lay understanding of human heredity and health difficult
- Collaborative by nature involving different partners with different and sometimes competing interests
- Cultural sensitivities around blood sampling
- Samples and data collected not just for primary research but also secondary use
- Limited ethics and regulatory frameworks for genomics and biobanking in Africa

# Ethics and Engagement at H3Africa

---

- **Consortium-wide engagement**
  1. Ethics and CE support for the consortium
  2. Guidelines for researchers (Informed Consent and CE)
  3. Ethics Consultation Meetings: African RECs and Policy Makers
  4. Empirical Research: Broad consent\_Seeley, Parker et al
  5. Engaging with the academic community (publications, scientific presentations, membership of thinktanks etc)
- **Embedded in scientific projects**
- **Funded ELSI projects**
  - Consent, community engagement, literacy in genomics, translations, stigma

# Different aims of engagement

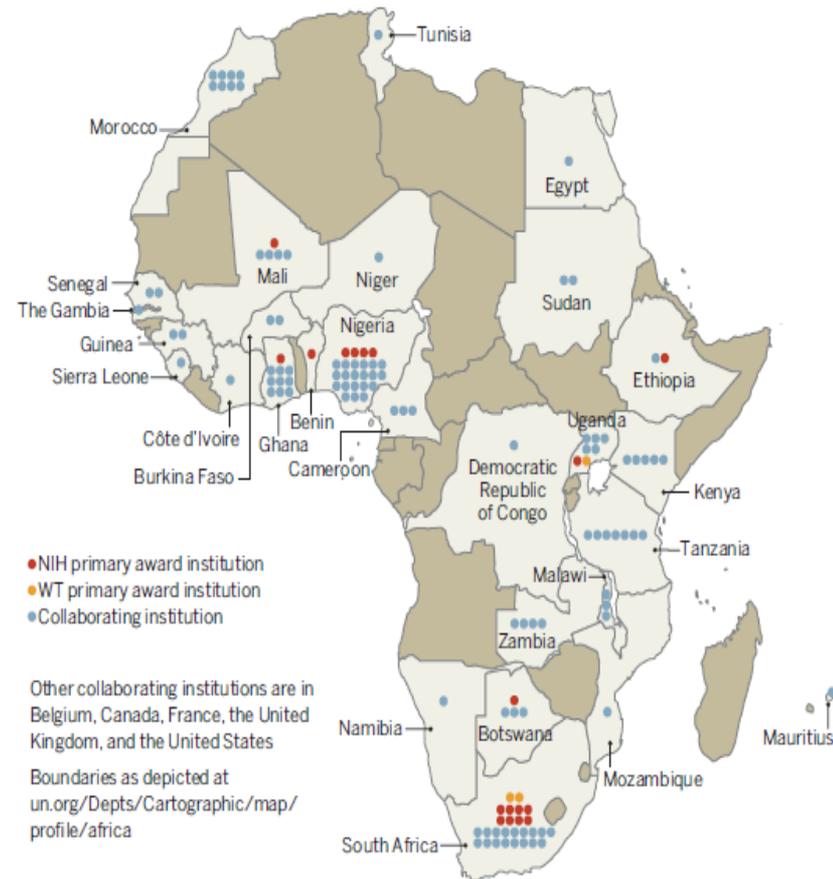

---

- Provide/exchange information about research with target community
- Create awareness, Educate and Mobilise the community for research
- Promote health and research literacy
- Built trust and get community buy-in and support for research
- Consult specific 'communities' on aspects of the research project
  - Broad consent, data and sample sharing
- Involvement?
- Collaboration?
  - What engagement beyond sample collection and establishment of biobank?

# Target 'communities'

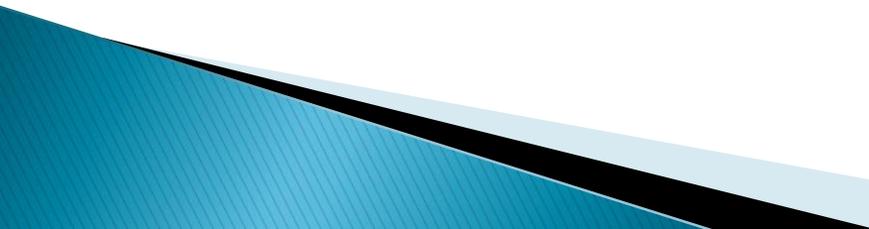

- Participants/patients/families
- Community representatives (Village Chiefs and elders)
- Researchers
- Hospital staff
- Women groups
- Community advisory boards/patient advocacy groups
- Populations in specific geographic settings
- Research ethics committees
- Schools
- Policy makers

## National Institutes of Health Wellcome Trust H3Africa Research Network

# Engagement Approaches (H3A)

---

- Community meetings
  - Radio and television appearance
  - Community representatives
  - Community advisory board (CABs)
  - Patient advocacy groups
  - Theatre/ Drama
  - Information leaflets
  - Comic books
  - Pamphlets on genomics and biobanking
  - Internet-based platform and mobile app
  - Social media (Facebook)
  - Video on biobanking
- 

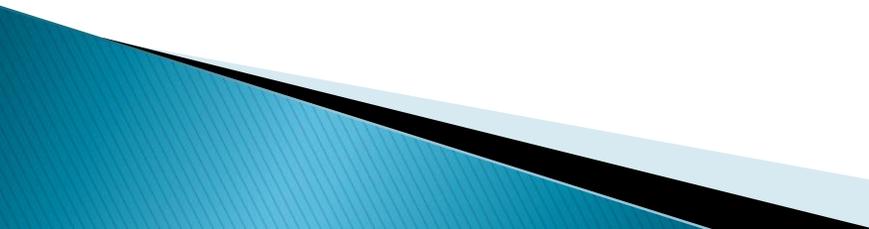

# Other CE challenges

---

- Defining the target community
    - Who to include beyond individual sample donors
    - Who defines the community? Researchers? Communities?
  - Identifying the ‘best’ methods for engagements
  - Meeting community expectations
  - Cost/dedicated budget
  - How do we know what works?
  - Lack of dedicated CE staff
- 

# Summary Thoughts

---

- CE in genomics is complex; different communities with different interests
  - Evolving understanding of the role of CE in genomics
    - CE as an afterthought to CE as an integral part of the research
    - Funding requirements
  - Anticipating and Overcoming challenges
  - Evaluation remains a challenge given complexities with the nature of the H3A projects
-
